

Raja Gacor Data

Raja Gacor — Aplikasi Masteran & Lomba Burung No. 1

PROJECT OVERVIEW

Raja Gacor adalah aplikasi mobile Flutter untuk komunitas pecinta burung berkicau di Indonesia. Platform ini menyediakan audio masteran profesional, jadwal lomba, notifikasi real-time, dan fitur viral share untuk memudahkan user menemukan dan berbagi konten berkualitas.

THE PROBLEM

Pecinta burung berkicau di Indonesia menghadapi 3 masalah utama:

- 1. Audio Masteran Berkualitas Sulit Ditemukan**
 - Banyak audio di YouTube/MP3 dengan noise, low quality
 - Tidak ada kategori/kurasi yang jelas
 - Playback tidak gapless, mengganggu latihan burung
 - 2. Info Lomba Tersebar di Berbagai Platform**
 - Facebook groups, WhatsApp, word-of-mouth
 - Tidak ada notifikasi otomatis untuk lomba terdekat
 - User sering ketinggalan event penting
 - 3. Tidak Ada Platform Terpusat untuk Komunitas**
 - Fragmented community across multiple apps
 - No way to share tips, photos, or achievements
 - Missing viral growth mechanism
-

THE SOLUTION

All-in-one platform dengan 4 pillar utama:

1. Audio Masteran HD

- Professional audio playback dengan just_audio engine
- Gapless playback untuk latihan kontinu
- Background playback (bisa multitask)
- Kategori: pleci, lovebird, kenari, murai, dll

2. Jadwal Lomba Terdekat

- Geolocation-based event discovery
- Filter by radius, date, category
- Push notification untuk lomba mendatang
- Integration dengan Google Calendar

3. Notifikasi Real-time

- Firebase Cloud Messaging untuk event updates
- Local notifications untuk reminder latihan
- Customizable notification preferences

4. Viral Share

- Deep linking dengan app_links
- Share audio/event ke WhatsApp, Instagram, Facebook
- Referral system untuk growth organik
- Facebook App Events untuk tracking

TECH STACK

Layer	Technology	Purpose
Framework	Flutter (Dart)	Cross-platform mobile
Audio Engine	just_audio + audio_service	HD playback, background audio
Backend	Firebase	Auth, database, storage, analytics
Database	Cloud Firestore	User data, events, audio metadata
Auth	Firebase Auth + Google Sign-In	User authentication
Notifications	Firebase Messaging + Local Notifications	Push & local alerts
Location	Geolocator	Event discovery by location
Share	share_plus + app_links	Viral growth, deep linking
Monetization	Google Mobile Ads	Banner, interstitial, rewarded
Premium	in_app_purchase	Remove ads, premium audio
Analytics	Firebase Analytics + Facebook App Events	User behavior tracking
Storage	Firebase Storage	Audio files, user-generated content
Images	image_picker	User upload foto/video burung

KEY FEATURES

- ☐ HD audio masteran with gapless playback
- ☐ Background audio playback (audio_service)
- ☐ Push notifications for events & updates
- ☐ In-app purchases for premium content (remove ads, exclusive audio)
- ☐ Google Ads integration (banner, interstitial, rewarded)
- ☐ Google Sign-In & Firebase Auth
- ☐ Image upload for user-generated content
- ☐ Viral sharing with deep links
- ☐ Location-based event filtering
- ☐ In-app update mechanism
- ☐ Material Design UI with custom fonts

DEVELOPMENT TIMELINE

Phase	Duration	Deliverables
Discovery	2 days	Market research, competitor analysis, feature list
Design	3 days	UI/UX wireframe, audio player design, navigation flow
MVP Build	14 days	Core audio playback, Firebase setup, basic UI
Beta Testing	7 days	Internal testing, audio quality validation
Launch	1 day	Play Store deployment, ASO optimization
Iteration	3 months	User feedback, feature additions, monetization tuning

Total MVP to Launch: 14 days

Current Version: 1.0.11+12 (ongoing iteration)

METHODOLOGY: AI-ASSISTED, HUMAN-VALIDATED

What AI Did:

- ✓ Flutter boilerplate & project structure
- ✓ UI component generation (buttons, lists, cards)
- ✓ Firebase integration code
- ✓ Audio player implementation (just_audio)
- ✓ AdMob integration template

What Human Did:

- ✓ Audio quality validation (noise check, volume normalization)
- ✓ UX flow design (user journey, navigation logic)
- ✓ Firebase security rules
- ✓ Play Store ASO (title, description, keywords, screenshots)
- ✓ Monetization strategy (ad placement, IAP pricing)
- ✓ Real-device testing (audio performance, battery usage)

GALLERY

[Insert screenshots:]

- Home screen — audio categories
- Audio player — playback controls
- Event list — lomba terdekat

4. Notification — event reminder
 5. Share — viral deep link
 6. Premium — IAP screen
